

Digital Image Processing

Programming lab

Project 1

1 Segment the objects with Matlab Programming.

2 Give processed images and Matlab codes.

Hint: background, noise and illumination effect on segmentation?

Digital Image Processing

Programming lab

Project 2

1 Write Matlab code, and choose Mean filter and Median filter to smooth images in the fold.

2 Give processed image for each image, and code in one m file.

Hint: How to choose filter according to specific noisy image.

Digital Image Processing

Programming lab

Project 3

1 Write Matlab code, and find a contrast enhancement method to get better contrast.

2 Give processed image for each image, and code in one m file.

Digital Image Processing

Programming lab

Project 4

1 Write Matlab code, and sharpen image by Laplacian operator.

2 Give processed image for each mage, and code in one m file.
